

Multi-Touch Marketing Attribution & ROI Dashboard Project Summary

Project Objective

Developed an end-to-end marketing analytics solution using Python, Oracle SQL and Power BI.

Dataset

Used three datasets: AD_SPEND, USER_JOURNEY and CONVERSIONS with approximately 10,000 records.

Python

Performed data cleaning, missing value handling, duplicate removal, datatype conversion, date standardization and exported cleaned data.

Oracle SQL

Imported cleaned data, wrote JOINS, Window Functions, attribution queries, KPI calculations (ROAS, CAC), and created SQL Views for reporting.

Power BI

Connected to Oracle, built relationships, KPI cards, Revenue by Channel, Spend by Channel, ROAS, CAC, First-Touch, Last-Touch, Marketing Performance Summary and slicers.

GitHub

Maintained project structure with SQL scripts, notebooks, Power BI report, screenshots and README using meaningful commits.

Business Value

Provides marketing managers with channel performance, attribution insights and ROI optimization for better budget allocation.
